---

On December 22, 2021, Xunlei received a Potential Case Award of the “2021 Trusted Blockchain Summit” hosted by the Trusted Blockchain Promotion Plan under the guidance of the China Academy of Information and Communications Technology (CAICT), China Communications Standards Association (CCSA) and the Internet Society of China (ISC).

As one of the most authoritative and academic professional conferences in the blockchain industry, the summit received extensive attention. Witnessed by a group of industry leading experts, the “Blockchain-based Hazardous Chemical Handling and Transportation Service Platform” built by Xunlei’s blockchain team won the Potential Case Award.

The award-winning project is a digital facility in the field of safe production built with Thunderchain’s core technology. It is a service-sharing platform that satisfies the need of enterprise safety management by combining satellite positioning, remote monitoring, and map engine technology. The platform provides various business functions such as line management, warehouse registration, data storage, data analysis, safety reminders, etc. It helps reduce the occurrence of hazardous chemical accidents for safe and efficient production.
